Registration:

As a user, I would like to have a form to fill in my details so that I could create an account for taking service of the application.

Acceptance Criteria:

1. There should be the following fields available for the registration process.
- First Name
- Last Name
- Email
- Date of Birth: Should be optional
- Mobile number
- Password: Generic password criteria

2. There should be a tick box option for agreeing terms and conditions of the application with the hyperlink of Terms and conditions that will take users to the Terms and Condition page. Accepting the Terms and conditions is mandatory.
3. Continue button should be at the end of the form to continue the registration process. Upon clicking the continue button the user should be redirected to the verification process. The user will receive verification code in both email and mobile number.
4. If users need help, there should be a hyperlink "Contact us" at the bottom of the page, when clicked, it will take users to the contact page.

Verification:

As a user, I should be able to receive verification code through SMS or Email to be able to use the service of the application.

Acceptance Criteria:

1. The verification code should be 6 digits only.
2. After entering the exact code sent by application, there should be a verify button on the bottom of the screen to submit the code.
3. Once the correct code is submitted the Users should be able to go to the next page.
4. If the verification code is incorrect, the user should be able to re enter the code.
5. If users need help, there should be a hyperlink "Contact us" at the bottom of the page, when clicked, it will take users to the contact page.
6. There should be a resend verification code button if the user does not receive OTP, user could click on the resend code button.
7. Resend code timing should be set using exponential functions, so that the user could click the resend button only at a shown time.
8. The verification text on the screen should be "Enter your verification code that we sent you through your email and phone number."

Login:

As a user, I want to login to the application, so that I can access the features provided in the app.

Acceptance Criteria:
1. There should be fields available for the user to enter:

- Email Address or **mobile number**
- Password

2. A forgotten password hyperlink should be available in the case that the user forgets their password. Upon clicking on the hyperlink, the user should be redirected to the forgot Password page.
3. After filling the email and password, the user should be able to click on Login to successfully view the jobs.
4. Upon clicking on Login, validation should run to make sure that both the fields are filled and they match with the existing user account in the database.
6. If the validation fails, the appropriate message should be shown as an error message.
7. If the validation checks, the user should be redirected to the Job page.
8. There should be a link "Contact us" at the bottom of the page, when clicked, it should take users to the contact details page.

Forgot Password:

As a User, I would like to reset my password if forgotten, so that I could re-set a new password.

Acceptance Criteria:

1. Users should be able to go to the **forgot password** page after clicking the forgot password hyperlink.
2. There should be a screen with a field where users can enter their email address or phone number where they can receive reset password OTP.
3. After entering the email address or mobile number, the send button should be at the bottom, upon clicking the email address or the mobile number will be noted in the back end.
4. Users should be able to get a message on their screen to check their email for the OTP if the user has entered the email address.
5. Users should be able to see the screen to enter 6 digits verification code and new password in the given box, retype the same password in the box below the password and click on reset password to reset their password. Passwords should meet generic password criteria. Users should be able to click continue to save the new password.
6. Users should be sent to the login page after the reset password is successful.
7. There should be a link for resending the code to get new code if previous OTP was not received.
8. The user should be able to click on the Contact us link which will take the user to contact us page, if needed help on resetting password.
